

## AMENDMENTS TO THE CLAIMS

1. (Currently Amended) A portable communication terminal comprising:  
  
a plurality of dipole antennas adapted to simultaneously perform a same communication; and  
  
phase control means for feeding power to each of the dipole antennas and for controlling respective phases of powers to be fed to the dipole antennas.
  
2. (Original) The portable communication terminal according to claim 1, further comprising:  
  
power distribution ratio adjusting means for adjusting a distribution ratio of powers to be respectively fed to the dipole antennas.
  
3. (Original) A portable communication terminal comprising:  
  
a dipole antenna arranged on a surface of a printed circuit board included in the terminal, the surface being opposite to a surface of the printed circuit board to which a speaker is mounted.
  
4. (Original) The portable communication terminal according to claim 3, wherein the dipole antenna is formed in an antenna pattern on an antenna board mounted on the printed circuit board.
  
5. (Original) The portable communication terminal according to claim 4, wherein the antenna pattern has a multi-layered pattern structure formed on the antenna board and folded at least one time.

6. (Currently Amended) A portable communication terminal comprising:  
a plurality of dipole antennas adapted to simultaneously perform a same communication  
and arranged on a surface of a printed circuit board included in the terminal, the surface  
being opposite to a surface of the printed circuit board to which a speaker is mounted; and  
phase control means for feeding power to each of the dipole antennas and for controlling  
respective phases of powers to be fed to the dipole antennas.
